

ARCHER EXPERTS

ISN'T IT TIME YOU CALLED AN EXPERT?

Product Datasheet

Now allow your business partners to manage their own Archer permissions groups and run reports showing which users belong to which groups.

Add and remove users from groups in real time. (Including bulk additions and removals!)

Your business partners are no longer dependent upon the Archer Administrator to add and remove people from business groups, they can do it themselves, while permissions confine them to only seeing groups they own!

The Group Management on-demand application contains built-in workflow with review frequency setting capability, last access data point for each user, and an audit trail of each change made to the group.

Archer Experts Group Management

Special points of interest:

- Business Partners can manage their own Archer permission groups and quickly see all users with access and last-time of access.
- Quickly adjust user access during turnover and reorganizations without Archer Administrator involvement.
- Schedule regular reviews via automated campaigns to maintain the integrity of user access and prevent unauthorized use.
