10 years exclusively in
Archer

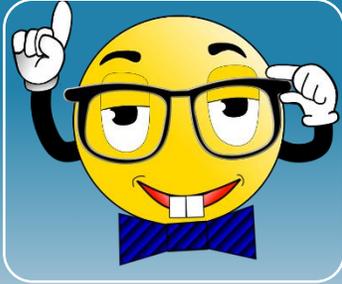

350+ Projects Completed

50+ Customers Served

Value Proposition

Senior Level Expertise

- Average 8 years of Archer experience per person.
- Average 22 years of IT experience per person.
- 15 Senior Archer Administrators.

Experience and Expertise To Do It Right the First Time

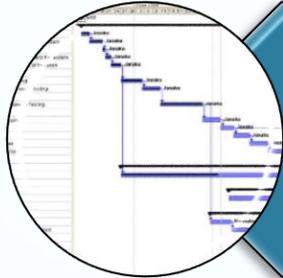

- No rework.
- Faster deployments.
- Lower cost and quick ROI.

A Focus on Archer and Our Customers

- We specialize exclusively in RSA Archer.
- We leave customer business stakeholders self-sufficient in the operation of Archer.

What is an Archer Strategic Roadmap?

A plan that outlines the Archer Use Cases needed to meet your business objectives.

A deployment sequence to ensure your program is built on a solid and scalable foundation.

The level of effort to complete your journey to GRC maturity.

Why Perform an Archer Strategic Roadmap?

Many companies don't understand where they want to be in their GRC journey, nor how to get there.

This results in arbitrary builds based upon a tactical urgency resulting in rework, wasted time, and wasted budget.

The roadmap focuses a company on their GRC strategy and defines the sequenced steps to get there.

It also defines the length of time to fully integrate a Risk Management program and what needs to be done to complete the roadmap within a defined period of time.

What Do You Get From an Archer Strategic Roadmap?

You get a documented plan that:

Identifies what you need to fill your Archer gaps.

Provides a phased approach to ensure a stable and scalable program is established.

Defines the level of effort and workstreams to meet your destination - on your schedule.

What is a Use Case Assessment?

It identifies:

Configuration roadblocks that are preventing a fully scalable deployment where the benefits of shared data and transparency maximize risk management effectiveness.

Untapped capabilities that can be exploited to gain greater business value.

Where best practices can be applied to improve maintainability and performance.

A game plan to get you to an optimized state.

Why Perform a Use Case Assessment?

Improper design and data positioning can create blind-spots and the inability to share critical decision-making data.

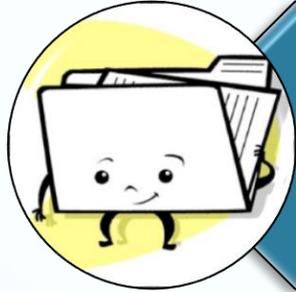

A poor design introduces additional complexity when making application changes or troubleshooting execution issues which ultimately inhibit your adaptability to a dynamic business climate.

A bad configuration can result in poor application performance, a bad user experience, and resistance in adopting a vital Risk Management tool.

What Do You Get From a Use Case Assessment?

You get documented and actionable recommendations to obtain the most value from your deployed use cases and applications.

Best practices that should be exercised in all future enhancements and use case deployments.

A game plan with the level of effort to apply the recommended improvements.

Archer Deployment Services

ARCHER EXPERTS

Our team of Project Managers, Archer Business Analysts, and Certified Archer Administrators are experts in the installation, configuration, and deployment of RSA Archer; whether it be a single solution implementation or a large-scale enterprise integration.

Our staff has an average of 8 years of Archer Configuration with 22 years in Information Technology and Business.

You'll always know what you are getting, what is being done, how long it will take, and where you are in the journey toward your goal.

We focus on one thing and one thing only – your success with Archer.

Let us help you make the journey.
